Biodegradable Scatter Box*

Environmental
Northumberland Crematorium is fitted with a state-of-the-art abatement system to minimise the harmful gases produced during the cremation process. It also benefits from underfloor heating using an innovative heat exchanger that captures and reuses the waste heat produced by the cremator. In addition a DeNOx system is used, to reduce harmful nitrogen oxides (NOx) released during the cremation process. We are only one of a handful of crematoria that use this system in the UK, making Northumberland Crematorium the greenest crematorium in the region.
